

## WILD AND SCENIC RIVERS APPENDIX

### SUMMARY

A total of 96 rivers and streams in the planning area were evaluated to determine if any were eligible to be studied for possible inclusion into the National Wild and Scenic River System. All 96 rivers and streams were determined to be ineligible for further study. They would be unmanageable due to the lack of public lands along the shoreline.

### Wild and Scenic River Study Process

A complete list of the river and streams evaluated was developed using the Bonneville Power Pacific Northwest Rivers Study. No additional rivers were identified through either public scoping or by the BLM planning team. For each river and stream on the list, the extent of public shoreline ownership was evaluated. In all cases, there were no blocks of public shoreline ownership large enough to effectively manage those values identified by the Pacific Northwest Rivers Study. Therefore, based on the lack of sufficient public shoreline ownership, it was concluded that no rivers or streams would be recommended for further study.
